

Build a Website & Put It Live with Claude Code

zero coding, zero hosting headaches — the exact workflow from the reel

```
$ hire_agency --cost "₹80,000" --wait "6 weeks"
$ fight_with_wordpress --plugins 23
$ learn_web_development --years 2
```

None of that. Below is the complete process — every prompt and command — to go from a blank folder to a **live website on the internet** in one sitting, with **Claude Code** doing all the engineering.

0 Setup (10 minutes, one time)

- Install Node.js from nodejs.org (18+), then Claude Code: `npm install -g @anthropic-ai/claude-code`
- Create a free **Vercel** account at vercel.com (free tier is genuinely enough — SSL, global hosting, custom domains)

1 Describe your business — Claude builds the site

Open a terminal in an empty folder, run **claude**, and paste:

PROMPT

Build a landing page for [YOUR BUSINESS — one plain-English sentence about what you sell and to whom]. I want: a hero section with a strong headline, 3 feature cards, a pricing section, and a footer. Warm modern design, mobile responsive. Use plain HTML and CSS in a single file, then start a local preview server and give me the URL.

Design taste, cheap: add "in the style of stripe.com" (or any site you love) to the prompt. Claude knows what those look like and borrows the vibe, not the code.

2 Review in your browser — change it by talking

Open the preview URL Claude gives you. Then just say what you see wrong:

PROMPTS (REAL EXAMPLES)

Make the headline bigger and the orange darker. · Add a testimonials section with 3 quotes. · The pricing feels hidden — move it above the footer and make the number huge.

Rule: one change per prompt, look, then next. You're the art director; Claude is the (very fast) developer.

3 One command puts it live

PROMPT

Deploy this site to Vercel production. Walk me through login if needed.

```
✓ Build completed
✓ SSL certificate issued
🌐 Live: https://yourbusiness.vercel.app · cost: ₹0
```

That URL is a real website — anyone in the world can open it, on any device, instantly.

4 Optional finishing moves (each is one prompt)

- **Custom domain:** "Connect mybusiness.com to this Vercel project — walk me through the DNS records."
- **Lead capture:** "Add an email signup form that saves to a Google Sheet."
- **WhatsApp button:** "Add a floating WhatsApp chat button linked to my number."
- **SEO basics:** "Add proper page titles, meta descriptions and an OG image so links preview well."

The 5 mistakes that stall beginners

- **Asking for the whole site in one giant prompt** — hero first, then one section at a time
- **Describing design in developer words** — say "feels cramped" or "too corporate"; Claude translates
- **Skipping the phone check** — open the live URL on your phone; most visitors are mobile
- **Fighting errors yourself** — paste any error straight back into Claude Code; it fixes its own mess
- **Polishing before publishing** — deploy the 80% version today; iterate on the live site tomorrow

Want this done for you? — Zero Hands

Zero Hands is my AI video production studio. We produce studio-quality, presenter-led videos with AI — **no cameras, no crews, no filming days** — and build the custom automation behind founders who show up online every day.

If you're a founder who knows you should be visible but can't keep filming — that's exactly who this is for.
